

## REQUIREMENTS

### **Operating System:**

Windows 2000, NT and XP platforms

### **SAS Base:**

Version 8.2 or higher must be installed and licensed. Versions 8.x require the latest hot fix from SAS, [www.sas.com](http://www.sas.com). A lack of the appropriate hot fix will result in failure of EZFit in Step 1. Version 9 does not require a hot fix.

### **SAS Integration Technologies client:**

This component is an executable file, inttech.exe, that can be downloaded from the SAS website, [www.sas.com](http://www.sas.com), by licensed SAS System users. It is not necessary to download this component if you are using Version 9 or higher. The Integration Technologies client is included with SAS software Version 9 and higher.

### **SAS/STAT:**

The SAS/STAT component is required for all SAS versions.

### **.NET framework:**

Microsoft's .NET framework V 1.1 is required. If not present, this file can be downloaded by running Windows update.

### **Disk Space:**

Installation of EZFit requires approximately 10 MB of disk space.

### **RAM:**

A minimum of 256 MB of RAM is required. For optimal performance, 512 MB RAM is recommended.

### **Screen Resolution:**

The minimum required screen resolution is 1024 x 768. Lower resolutions are not supported. For optimal viewing, 1024 x 768 is the recommended screen resolution.

### **Internet Access:**

EZFit requires Internet access to connect to the licensing server for verification purposes. After initial registration, periodic check-ins are still required. For this reason, you should run EZFit when connected to the Internet. If you wish to work in an offline state, EZFit allows several session launches before requiring re-registration. After exceeding the allowable number of offline sessions, EZFit requires re-registration of your license key. For this reason, please keep your license key in an easily accessible place.
